Project 1B - J: "IDE Practice"

Name:

Perform the following tasks in order to familiarize yourself with the *MS C/C++.NET 2013* IDE:

RECORD ALL MOUSE/KEY ACTIONS needed to carry out the stated operations. Use the space between each question to record your answer. Documentation should always be clear and succinct. Print out your document when completed.

Do not permanently alter your original Prog0.c file with the indicated operations.

- b) Use the copy operations to make two additional copies of the heading comment block placed at the end of the existing file. Be sure to explain how to make two copies (*not just one*), and how to place the copies at the end of the original file.

- c) Move the cursor to the beginning of the file.

- d) Move the cursor to the end of the file (*not just the end of the screen*).

- e) Use a block delete operation to delete one copy of the heading comment.

- f) Use the help command to learn about type "void" (*be sure to explain how you use the help system rather than explain what "void" means*).

- g) Use the find operation to place the cursor on the first occurrence of the letter "m".

- h) Use the find operation to place the cursor on the first occurrence of the word "Parameters".

- i) Mark a position in a file and then return to the same position after visiting several intermediate positions in the file.

- j) Mark the cursor position of the letter "m" in "main"; move the cursor to the beginning of the file and make the cursor jump back to the "m" in "main".

When you are finished, restore the file to its original form before any editing was done, then compile and execute the program.
